

Jonathan Byrd's Cafeteria

Jonathan Byrd's is a longtime south side institution that was an early CRS/Maitre'D customer. The multi-million dollar eatery features a new express concept with a drive thru window and fresh bakery goods. Speed of service is not an option at Jonathan Byrd's and the combination of Maitre'D running on IBM SurePos delivers. Jonathan Byrd's utilizes nine terminals along with an expediter video system at the drive thru operation. The Maitre'D system handles electronic gift cards, high speed credit authorization, employee timekeeping and customer receipt scanning.

Kevin Manship (middle) says "the integration of high speed credit simply adds to the processing speed of the overall transaction"

"implementation of video screens have been a big step in expediting drive-thru orders quickly and accurately"

"As you are aware, the selection of Maitre'D was made after a very critical analysis of several leading systems on the marketplace—I am quite satisfied I made the right choice"

"It's really simple and fast, we can probably train a new cashier in less than 20 minutes" Programming a new menu item is extremely easy and quick.

"As we expand our catering business, CRS and Maitre'D will definitely be part of any future Jonathan Byrd's food service operations"
